Versatile calender of small dimensions for sublimation printing. It guarantees reduction of production costs, while increasing productivity, as well as multiple working systems :

- > printing paper in roll – material to be printed in roll
- > printing paper in roll – material to be printed in pieces
- > printing paper in sheets – material to be printed in pieces
- > printing paper in sheets – material to be printed in roll

It is possible to use the machine with one single operator (who charges and discharges) or two operators (one charging in entry, while the second one discharging in exit) depending on customer needs : printed materials in exit (piece) can be discharged in the front of the machine or, alternatively, in the back of the machine.

- > NOMEX felt
- > The printing cylinder uses a heating system patented by Monti Antonio Spa in vacuum sealed oil bath. This method guarantees perfect uniformity of temperature, maintaining low electric consumption.
